

- The Baby Predator concept: Inflatable racing catamaran made of carbon fibre with carbon-reinforced PVC inflatable hulls.
- Easy sailing, light weight, easy dis/assembly, suitable for air freight, no permit.
- Catamaran for professionals, experts and beginners.
- Catamaran with modern rudder and daggerboard profiles. Frames, beams and the entire rig from carbon fibre.
- The platform of the Baby Predator has been developed since 2008 and is continuously optimized according to the latest knowledge on: Underwater T-foils, carbon reinforcement of PVC and an 8m version as a big sister.
- The development of the Baby Predator was accompanied by the famous America's Cup yacht design office Schickler Tagliapietra Yacht Design.

# BABY PREDATOR

Prototype # 3.

Prototype # 2.

- Concept of central tube for maximal torsion stiffness. Rudder, mast, daggerboard and beams are all connected in a central tube.
- Telescopic beams, wing mast with 2 joints for easy transport, maximum part length 2,4m.

There are two ways of transporting – operating the Baby Predator Catamaran. One way is to have the platform assembled and use a simple system of telescopic beams, then the weight of the platform is 35 kg and is easy transportable on the roof of any personal car.

Prototype # 4.

The Baby Predator Catamaran presented at „Boot 2012“ is the prototype # 4, all other prototypes built since 2008 were sold and are sailing successfully.

The Baby Predator is developed and built along famous F20 all composite Predator catamaran:

[www.F20predator.com](http://www.F20predator.com)

Prototype # 4.

Then assembly ready-to-sail with mast and sailtakes about 15 minutes. The other option is to disassemble the catamaran completely. Then it is possible to transport parts in three packs no longer than 2,4m and no heavier than 22kg. These packs are air transportable. To assemble the catamaran complete takes max 60 minutes.

Prototype # 4.

- 12m<sup>2</sup> pentex mainsail, 14 m<sup>2</sup> gennaker, trapeze
- 5m inflatable hulls
- Gennaker with snuffersystem
- Blocks and fittings from Ronstan©
- 65 Kg total weight
- Transport length 2,4m
- Price (based on configuration) from 6.990 Euro to 8.500 Euro including 19% VAT.
